"When we have produced an antiseptic which can be taken internally, without risk of injury to cell-tissue, we will have conquered infectious disease."

LORD LISTER.

"Our so called diseases are but symptoms of one common disorder, internal bacterial infection Once this infection is destroyed, the symptoms we call 'disease disappear."—ALEX CLEMENT.

Tuberculosis

The Problem Solved

The title of this little book is not merely a challenge to present-day methods of treatment, it is an affirmation that the solution of the problem of stamping out tuberculosis has at last been found. This solution is the combination of 'Yadil' Antiseptic with sound, natural food and pure air. 'Yadil' removes from the system the secondary cause of the disease, whether it be the tubercle bacillus or some other agent yet to be ascertained, and the diet supplies all the life-giving and tissue-building elements essential to permanent good health.

Two conditions are necessary for the stamping out of consumption :—

1. The largest possible number of known consumptives must be restored to health.
2. Fresh cases must be prevented.

To realise these two conditions the treatment must be simple, safe, inexpensive, easily carried out at home, obtainable everywhere on demand and of proved value.

The 'Yadil' Antiseptic treatment alone meets these demands in their entirety, as we show

below. When it has been adopted nationally, Great Britain will be the first country in the world to be freed from the terrible scourge of tuberculosis.

The 'Yadil' Treatment. The 'Yadil' Treatment for consumption and all forms of tubercular disease is briefly as follows. Take, three or four times a day, during meals, one teaspoonful of 'Yadil,' followed, preferably, by some fresh fruit juice. Leave off all other drugs, medicines, tonics, etc. Replace white by brown bread. Replace meat and sugary dishes by fruit and nuts. Eat salads of lettuce and tomato dressed with oil, salt, pepper and lemon juice. Never use vinegar. Masticate all food thoroughly. Never drink during meals. Live out of doors as much as possible, sleep in the open if possible, or alone in a bedroom with the window open day and night.

For fuller details see THE 'YADIL' BOOK.

The Treatment is Simple. It includes pure air and pure food, to build up healthy tissue, and the taking of 'Yadil' Antiseptic three or four times a day, at meal times, to free the system from the secondary cause of the disease. THE YADIL BOOK (*see page* 36) explains the necessity for breathing only fresh air, night and day, and indicates the nature of pure food.

The Treatment is Safe. 'Yadil,' though strongly antiseptic, does its work without causing the least injury to the tissues of the body. Being non-poisonous, it may be handled, even by children, with perfect safety. Overdoses can do no harm, for it acts in physiological harmony with the living cells and vital processes of the human body. Fresh air and pure food, the two other constituents of the treatment, are safe; it is polluted air and unsound diet that are the chief, or primary, causes of consumption.

The Treatment is Inexpensive. A 6-oz. bottle of 'Yadil' is sufficient, in the majority of cases, to cut short a persistent cough or cold, to ward off an attack of pneumonia and to nip in the bud, at their earliest symptoms, a host of bronchial and lung diseases which, together with many others, are known to be precursors of consumption. Persistent bronchitis is generally brought to an end with two or three 6-oz. bottles, or less than a pint.

Consumption itself, in its earliest stages, may usually be mastered by a pint or two; in the second stage it may require three or four pints only; while the third, or final, stage—usually considered to be hopeless—is by no means beyond help. Cases are on record in which the patients were not expected to live more than a few weeks, and which yet resulted in complete restoration to health. Some of these are included among the reports at the end of this brochure.

In such cases, the treatment may require a fairly long time—from six to twelve months—before perfect health is restored; but even then the cost in 'Yadil,' if bought by the pint or the quart, may be less than £5 though it be for the longer period.

Fresh air costs nothing at all, and pure food is the cheapest and the most easily prepared of all foods.

The Treatment is easy to carry out at home. Since it involves merely the taking of 'Yadil,' the breathing of fresh air, night and day, and the eating of pure foods, the treatment may be carried out in almost every home in the land. It is, in fact, often more easy to secure the right diet in the home, where its ordering is under one's personal control, than in an establishment, where

the inmates are of necessity fed on more or less routine lines and by contract.

The Treatment is obtainable everywhere. 'Yadil' Antiseptic can be obtained of the ten thousand chemists in Great Britain, and fresh air and pure food are within reach of everyone, everywhere. In time, 'Yadil' will be sold by chemists and stores the world over, and this will mean the possibility of the universal stamping out of this dread disease. It will be a triumph for British science and doggedness of purpose.

The Treatment is of Proved Value. 'Yadil' Antiseptic has been used by thousands of doctors for more than seven years, in the treatment of a very large number of diseases, including every form of tuberculosis, whether of the lungs, glands, bones, skin or other parts. Their success has been amazing. Over and over again has Mr. Clement been pressed by doctors to make known the fact that consumption may be cured by 'Yadil,' but, in view of the tremendous responsibility involved in the taking of such a step, he preferred to wait until the evidence sent to him by doctors and sufferers who had been cured justified such an announcement. There is no longer any excuse for further delay. For evidence, read THE YADIL BOOK, and bear in mind the fact that twenty times as many verbal reports as are published in that book were received from medical men and people who have been cured. Were 'Yadil' used in the treatment of all diseases, without exception, consumption would be practically stamped out within three years by the simple process of curing most cases known at present and preventing fresh ones.

The effect of 'Yadil' in the treatment of consumption and all disorders leading to it enables us to say definitely that, in the future,

only those who wish to become consumptive will do so. Now that 'Yadil' Antiseptic is available to the nation through all chemists, there is no excuse whatever for the heavy death-rate caused by consumption and other chest and lung diseases.

THE FAILURE OF OLD TREATMENTS

Old remedies are admittedly useless in the fight against tuberculosis. The proof that they are worthless is to be found in official reports. These show that seven in every ten sanatorium patients pass away within four years of leaving those institutions. Many of the remainder follow soon after. To persist with such useless treatment is, to say the least of it, unfair to the patients and to the nation.

The 'Yadil' treatment would save at least 400,000 out of the 500,000 consumptives now in our midst. If used in every disorder which prepares the ground for consumption new cases would seldom develop. In this way, *and in this way alone,* will an end be put to the scourge which, in Europe and America alone, has carried off over ten million people during the last ten years—more than the Great War and influenza together!

Treatment by tuberculin, and injections of the vaccines and serums now in such favour, are often very dangerous and have caused bitter disappointment in the vast majority of cases. They will continue to do so, because they are physiologically wrong. Moreover, the injection method cannot be used to prevent fresh cases, owing to the sheer impossibility of inoculating everyone who might be suffering from one or other of the large number of disorders which are known to

precede consumption. Among these may be mentioned, pneumonia, pleurisy, influenza, coughs and colds, catarrh, bronchitis, measles, scarlet fever, diphtheria, hæmorrhage, bronchiectasis, puerperal or milk fever and anæmia.

'Yadil' cures these precursor diseases more promptly than any other known remedy, and security against consumption is thus assured at one and the same time. Everyone who has suffered recently from any of these ailments should not hesitate to commence, without delay, a course of internal disinfection with 'Yadil' Antiseptic, or 'Yadil' Pills, as a safeguard against the possible development of tuberculosis.

For this purpose it might be taken for two weeks a month, alternating the weeks, for two or three months, at the morning and evening meals. The Pills may be used if this form be preferred. Anyone whose throat is relaxed, weak or easily irritated, should use 'Yadil' as a gargle morning and evening and the Pastilles when out in cold and damp weather.

Some 80,000 fresh cases of consumption are notified every year in this country. There die annually from this disease about 42,000 people, pneumonic disorders account for another 40,000, while yet nearly 40,000 more die of bronchitis, laryngitis, tonsilitis, etc.

In all, over 120,000 deaths annually are due to lung and chest diseases. This means that, of those now alive in Great Britain, eleven million will, if present conditions continue, be carried off by these maladies to premature graves. By the early use of 'Yadil' this enormous untimely loss of precious lives would be avoided.

Would you help to bring this about and to make Great Britain the first country in the world

free from consumption? Here are some suggestions as to how you may do so :—

1. Make yourself and family safe against all lung, chest and throat diseases by always having at home a supply of 'Yadil' Antiseptic, and using it at the first sign of a cold or rise in temperature.
2. Tell your friends, and all whom you may meet, about 'Yadil.'
3. Make it known to all sufferers.
4. Encourage your chemist to keep a regular stock of all 'Yadil' preparations, in all sizes.
5. Finally, as your practical share in this great life-saving campaign, get a copy of THE YADIL BOOK, *read* it and induce all your friends to do likewise. (*See page* 36.)

It will require the united efforts of all who desire to see an end of consumption, to bring about the use of 'Yadil' in every home. Such action, together with the powerful aid of the medical profession, would ensure the success of our campaign, and there would result a nation enjoying better health, longer life and greater prosperity.

THE ECONOMY OF 'YADIL'

To those who are under the impression that 'Yadil' is expensive, we would submit the following facts, which prove that it is, in reality, very economical.

The ordinary bottle of medicine, supplied by the chemist on a doctor's prescription, costs, on the average, 1/6, and contains 8 or 12 doses. The cost per dose is therefore :

2¼d for the 8-dose bottle and
1½d for the 12-dose one.

This gives 5 doses for 11¼d and 7½d respectively.

'Yadil' Antiseptic	Ordinary Medicine	
6 oz. bottle—48 doses	Bottle———8 doses	Bottle———12 doses
FIVE doses cost *LESS* than **6d**	*FIVE* doses cost **$11\frac{1}{4}$d**	*FIVE* doses cost **$7\frac{1}{2}$d**
Good for All Diseases and as First Aid Dressing	Good for only One Disease, and no use as a First Aid Dressing	

'Yadil' is cheaper than medicine

The 6 oz. bottle of 'Yadil' costs 4/9 and contains 48 doses. **The cost per dose, therefore, is less than 1$\frac{1}{10}$d, or 5 doses for less than 6d;** so that even the higher-priced Antiseptic is less expensive than the cheaper of the two bottles of ordinary medicine, and only a trifle more than half the cost of the 8-dose bottle.

Again, while the ordinary medicine continues to be 2¼d and 1½d per dose for each succeeding bottle, 'Yadil,' when bought in larger quantities than the 6 oz. size, becomes progressively cheaper. Thus the pint bottle works out at:

$\frac{1}{10}$d per dose, or a little less than a penny; the quart bottle at only a little over ¾d per dose, and so on.

Finally, 'Yadil,' however old it may be, never loses its strength or goes bad. It may therefore be stored in the house and kept handy for immediate use, either as a First Aid dressing in accidents—for which it is unrivalled—or on the appearance of the earliest symptoms of disease.

It will thus nip in the bud many serious disorders and ward off all epidemics, whether in the home or the school; and the consequent saving in worry and expense would alone make it not only an invaluable remedy, but, on the principle that a stitch in time saves nine, a truly economical one.

MEDICAL OPINION

The British Journal of Tuberculosis (July, 1919) says: 'Yadil,' or trimethenal allylic carbide, has found much favour in the treatment of a number of diseases of microbic origin, and in many cases of pulmonary tuberculosis, especially when there is mixed infection. 'Yadil' Antiseptic is non-poisonous, non-caustic, and non-irritant. It contains no metallic salts and is free from phenols, cresols, or other irritant germicides. It does not coagulate albumen, and is miscible with water and alcohol. It is non-inflammable and is one of the

safest of antiseptics, deodorizers and germicides for internal medication. It has been used with great advantage in many forms of tuberculosis and in the treatment of numerous lesions of the respiratory system often met with in consumptive cases. It is of service in dealing with offensive conditions of the nose and throat. It makes an excellent gargle and mouth-wash, and is oftentimes very useful in dealing with patients who are subject to offensive perspiration. 'Yadil' is now available in several forms: it can be obtained in the liquid state for internal administration and external application; a 'Yadil' Jelly is an excellent pharmaceutical preparation which finds favour with many; there is a 'Yadil' Antiseptic Ointment; and recently a 'Yadil' Elixir has been introduced, intended for internal administration. From the results of our investigation of these preparations we would strongly advise their trial, not only in sanatoria and for cases attending tuberculosis dispensaries, but for the therapeutic needs of a number of pathological conditions met with in private practice among consumptives and other tuberculous cases.

The following clinical reports sent by medical men and others during the last five years establish the specific value of 'Yadil' (trimethenal allylic carbide) in tubercular disease.

Tuberculosis. 5*th December*, 1917.

I have only just begun to use 'Yadil' in two cases. Each has had 30 minims, three times a day, for about six days. Temperature has fallen in each case and become steadier, but whether due to 'Yadil' is not quite clear.

Both are bad cases; one, an old semi-quiescent disease of the whole of one lung, with recent activity in the other, and the other, a case of patchy disease, fairly active, scattered over both lungs.

I am going to make more extensive use of 'Yadil.'

11*th December*, 1917.

Arthritis, Colitis, Neuritis, Pulmonary Diseases.

It is with great pleasure that I bear testimony to the efficacy of 'Yadil' I have used it in a variety of cases and have noticed that my patients have received marked benefit from its use. In my practice its benefit has been enhanced, because in my special work it has always

been combined with (or used in conjunction with) electrical treatment.

I have prescribed it freely in numerous cases of gastric affections, colitis, neuritis, arthritis, and especially in chronic pulmonary diseases. Many cases of distressing cough with expectoration, which I have proved radiologically to be attended with thickening of the interstitial lung tissue and hence probably of early tubercular disease, have cleared up entirely during its administration. The *few* patients who at first objected to its taste have always got over that repugnance and took it afterwards with perfect indifference. I am confident that its use will extend, as in 'Yadil' the Profession possesses a great weapon in combating disease and a remedy which has no injurious or depressing effect, in fact, the reverse—a tonic and stimulating effect in addition to its destructive action on bacteria. ——L.R.C.P., M.R.C.S.

Lupus Vulgaris. 10*th April*, 1918.

I thank you for sending me your information concerning 'Yadil' Antiseptic. Your preparation is not new to me as I have been using your ointment with success for two months past now. I have found it particularly beneficial as a dressing for advanced cases of lupus vulgaris. I have not yet tried oral administrations of the drug, but will ask my dispenser to order some. I wish to try it in a severe case of ulcerative colitis. Have you any evidence of its value as a urinary antiseptic? ——M.R.C.S., L.R.C.P.

Pneumonia. 11*th June*, 1918.

I am still prescribing 'Yadil.' I have tried it in two or three cases of pneumonia lately, with, I consider, satisfactory results. ——M.R.C.S., L.R.C.P.

Pulmonary Tuberculosis. 15*th June*, 1918.

A little over a year ago I was called to see a lady, age about 40. She was very ill, weak, was running a temperature of 102 deg. daily, and was coughing a great deal. On examination I found one lung affected by tuberculosis and the other partly so at the apex. Typical râles were heard and there was dullness over a large area at the base of the left lung. Another doctor was called in in consultation. We inserted a needle to see if by chance the dullness was due to fluid, but got none. After a careful examination we agreed that the patient could not possibly live long, probably not many weeks.

I got this patient to live in a large tent with one side open all the summer. I prescribed cod liver oil, and a quart of milk a day, also scraped raw meat which, however, she did not like and did not take as much as I wished. Her appetite was very poor, but so long as she took the milk and a reasonable amount of food I did not insist on more. She therefore was not subjected to the usual cramming process. She had a great deal of cough, so I gave her Terpin Hydrate and Heroin Co. Tablets, P.D., so that she should have her nights as quiet as possible. For some time there was no improvement, the patient looked and was very ill, in fact, she looked like a dead person as one approached her. I now began to give her 'Yadil' Antiseptic, one drachm three times daily in milk, otherwise the treatment was continued as before. She very soon began to improve, she put on flesh, coughed less, and gained strength. By the end of August she was well enough to return to town, though I insisted on her going to a house facing the sea and keeping open windows. At this time she was again examined by the consultant who saw her previously and he was astonished at the improvement. The patient was persevering and did exactly as I told her. She was now able to do without the Terpin and Heroin Co., was eating and sleeping well, and gaining strength daily. At the end of a year this lady seems perfectly well. She is fatter than she has ever been in her life, and is looking well. Breath sounds are pure, there are no râles and only a trace of thickened pleura left. There is now no cough, she looks better than she has ever done. The complete cure has taken nearly a year, but considering the patient's condition the result is little short of a miracle. There is tuberculosis in the family. I do not consider this patient was a specially good subject for treatment, rather the other way.

I have other patients who have improved greatly on 'Yadil' Antiseptic, though as yet they have not had long enough for me to say what the result will be. One case is nothing to go by, but it is encouraging enough to make one wish to give the treatment further trial in these sad cases. ——M.B., Ch.B.

Tuberculosis. *5th August,* 1918.

For several years past I have given special attention to the treatment of tuberculosis in its various forms, and have had very gratifying results. I find now that

the addition of 'Yadil' to the mixture given enhances its beneficial effects, so that the combination is almost specific in the results obtained. I have not used 'Yadil' otherwise than in combination.

——L.R.C.P.I., L.M., L.R.C.S.I.

Phthisis. *25th October,* 1918.

It gives me better results in phthisis than anything else. The treatment of microbic diseases by a non-poisonous antiseptic is far more rational than the anti-pyretic treatment, which, while it relieves pain and gives comfort, does not go to the root of the matter.

——M.B., B.Ch.

Specific in Influenza. 13*th May,* 1919.

I have now much pleasure in stating that I have tested your preparation 'Yadil' in influenza more particularly, and I have formed the opinion that it is *absolutely specific* in this disease ——M.B., C.M.

13*th May,* 1919.

Tuberculosis.

I have used 'Yadil' in advanced cases of pulmonary tuberculosis with satisfactory results. It is useful in keeping down fœtor. I am glad to hear it is to be more palatable. ——M.D., F.R.C.S.

Tuberculosis. 14*th May,* 1919.

I have much pleasure in stating that I have found 'Yadil' of great value in the treatment of a case of advanced pulmonary tuberculosis. I attribute the benefit to its antiseptic properties. ——F.R.C.S.I., L.R.C.P.

Tubercular Abscess. 15*th May,* 1919.

I have treated a woman of 28, suffering from tuberculosis, with tuberculous abscesses, and who was very debilitated. The abscesses were opened, drained and syringed with boric acid, the patient put on 'Yadil,' and in six weeks all the abscesses were healed. She had put on one stone weight and looked well and healthy, and continues so after 18 months.

——M.D., F.R.C.S., D.P.H.

Tuberculosis and Diphtheria. 17*th May*, 1919.

I have used a fair quantity of this preparation and have certainly found it of marked value in the treatment of pulmonary tuberculosis, and also, in the form of the Jelly, very useful in diphtheria and septic sore throats, but my experience of it is insufficient to enable me to arrive at any definite conclusion. I certainly found it of no apparent value in other febrile and infectious conditions in which I used it. However, I am sufficiently impressed with its value to continue its use further, especially in tuberculosis.

——M.R.C.S., L.R.C.P.

Tuberculosis. 18*th May*, 1919.

I have given 'Yadil' Antiseptic in two cases of pulmonary tuberculosis with very satisfactory results. One case had dullness in left apex, two attacks of hæmoptysis. The diagnosis was confirmed by bacteriological examination, tubercle bacilli being found in the sputum. The patient, a woman, is seemingly quite well now and gets about her ordinary household duties. She has not been taking any medicine for 12 months. The other case improved considerably, and is now leaving sanatorium treatment.

——L.R.C.P., L.R.C.S., Edin.

Hip Disease. 19*th May*, 1919.

I am favourably impressed with the results of the use of 'Yadil' in cases of influenza, pneumonia, and *tubercular diseases*. One case I tried it in was an abscess of the thigh, extending from an old hip disease case, and proved very satisfactory. The abscess was aspirated under strict antiseptic conditions, so as to avoid risk of a secondary infection, and then injected with 'Yadil' and glycerine, 1 in 8. This was repeated on three subsequent occasions. The abscess has gone. There seems to be no need for further treatment. Please send me some Elixir 'Yadil.'

——M.R.C.S., L.R.C.P.

Pulmonary Tuberculosis. 19*th May*, 1919.

I am convinced that 'Yadil' is sometimes effective in

lessening sputum in bronchitic types of pulmonary tuberculosis. ——M.D., M.R.C.P., D.P.H.

Tubercular Diarrhœa. *22nd May,* 1919.

Your 'Yadil' Antiseptic has been of much service in controlling tubercular diarrhœa in a marked case of long standing, complicated by hip joint disease. I shall continue 'Yadil' as it has proved of much use. I may say that a course of careful tuberculin injection has not been effective. ——M.A., M.B., C.M. (Edin.).

One of My Stock Drugs. 31*st May,* 1919.

Please send me another gallon of 'Yadil' Antiseptic. I have found it of great value in certain cases of lung affection and influenza. It now forms one of my stock drugs. ——M.D., ——Hospital.

Autotoxæmia, Cumulative. *9th June,* 1919.

I have found 'Yadil' a most useful addition to the armamentarium. I have tried it in cases of phthisis which were precluded from obtaining sanatorium treatment. One case in particular was so bad with bronchitis and hæmoptysis that he could not leave his garden. He took drachm doses of 'Yadil' three times daily for some months—he got rid of his bronchitis and the phthisis was arrested.

Another patient had a sharp febrile attack about every three months, for which no cause could be assigned. I sent him to a consultant who diagnosed it to be a form of cumulative autotoxæmia. I placed him on 'Yadil' for two months, since when he has had no further attack for more than a year. During the exhibition of 'Yadil' I have observed no ill effect whatever, and the results have generally speaking been very satisfactory. ——M.R.C.S., L.R.C.P., M.O.H.

Remarkable Recoveries. 17*th June,* 1919.

I have used 'Yadil' in a certain number of cases during the influenzal epidemic in the spring months, and am of the opinion that it exerts a favourable action especially in cases of pneumonia, pulmonary congestion and continued high fever in that disease. In eight particularly bad cases in which it was administered, six recovered and two died; the latter were unfavourable cases, particularly from their surroundings, and lack of adequate nursing, etc., but I certainly thought 'Yadil' produced some improvement. Of the other six cases,

two at all events were very remarkable recoveries, and I am certainly of the opinion that 'Yadil' very materially helped. ——M.B.

No Complications Ensued. *22nd June,* 1919.

I beg to inform you that I used 'Yadil' during a recent epidemic of influenza on board. It was given in the form and doses recommended, *i.e.,* with aq. menth. pip., and I found that it was borne well by the patients. It was tried in 12 cases of influenza, and in all these cases the temperatures dropped after the second day and were normal on the fourth or fifth. No complications ensued in any of the twelve cases.

——Surgeon Commander, R.N.

Pulmonary Tuberculosis. *5th July,* 1919.

Please send me a two-pound bottle of 'Yadil.' I am using it for pulmonary tubercle and other chronic lung cases, with fair success in some. ——M.D.

Pulmonary Consumption. *17th September,* 1919.

Some little time ago I got half a gallon of 'Yadil' to try in two cases of pulmonary consumption. Case I. Early or 1st stage. Results have been very satisfactory so far. Evening temperature disappeared in a week, appetite improved very much. Cough nearly gone. In this case the improved appetite was very marked after taking the 'Yadil,' as before that I could not get her sufficiently nourished, owing to complete loss of appetite, and no kind of tonic improved it. Case II. Advanced stage of pulmonary consumption, or 2nd stage. In this case, I can't say much yet, still the results obtained encourage me to continue 'Yadil.' The evening temperature has become normal, so that the patient is more comfortable. Cough not improved so far. Will you please send me one gallon more, for which I enclose cheque. ——M.B., C.M.

Chronic Phthisis, etc. *18th September,* 1919.

Please send me 1 gallon 'Yadil' Liquid, for which I enclose my cheque.

I may say I have found 'Yadil,' of which I have used nearly ½ gallon, a most useful addition to my surgery. I have used it with success in septic sore throat, septic rashes, gonorrhœa, one case of chronic phthisis, ulcerative stomatitis, one case of asthma, one

case of furunculosis, and therefore have confidence that it merits a place of honour among my drugs.

——M.D., Ch.B.

One of the Greatest Boons. *3rd October,* 1919.

I wish to register my opinion of 'Yadil.' I consider it one of the greatest boons that has come to the hands of the medical practitioner in recent years, both for surgical and medical purposes. Its one drawback is the allylic smell and flavour, but outside its medical and surgical value I think you do not sufficiently exploit its prophylactic quality.

I am very pleased to receive *'Yadil' Clinical Notes,* but they only confirm my own experience.

——L.M., L.R.C.S.I., L.R.C.P.I.

Phthisis. *21st October,* 1919.

Please send me half a gallon of 'Yadil' per return, for which I enclose cheque. I am getting most satisfactory results in a girl of 13. Since taking 'Yadil' she has put on "flesh" (as her people say) at the rate of ¾ of a lb. per week. The cough has gone, as have the night sweats, and the appetite is excellent.

——L.F.P.S., Glas.

Influenza and Pneumonia. *5th November,* 1919.

Last March I had a very bad case of influenza. The patient was one of our soldiers who had been a prisoner in Germany for nearly three years, and when he arrived home he was in a very emaciated condition. Soon after arriving home he got influenza, and very suddenly pneumonia appeared. His temperature rapidly rose, and he reached 105.2, and in this critical condition he remained for three days—no remedy seemed to ease him. I had seen mention of 'Yadil' in the *Practitioner,* and I thought I would try it as a last resource. I got some from you, and I am pleased to say that the patient began to mend from the first day he tried it, and continued taking it till he became convalescent. The Jelly proved to be very soothing in relieving the congestion of the throat.

I have used 'Yadil' in pulmonary complaints and have found it usually beneficial. ——L.R.C.P. & S.

Pneumonia Aborted. *5th November,* 1919.

Re my experience of 'Yadil,' I have pleasure in stating

that I have been so favourably impressed by it that I never think of using anything else in influenza.

The last case I used it in I have every reason to believe it aborted an attack of pneumonia. As well as the usual symptoms of influenza, pain in head, eyeballs, back and legs, and profound prostration, he had a short cough, severe pain in right side below angle of scapula which prevented him breathing or coughing deeply. He had temperature 104, pulse 90, respirations 36. A lad of about 23. I told his mother he had influenza and would develop pneumonia, though I could not then get the physical signs. Directed his mother to keep sputum for me. It was quite characteristic, rusty, thick and glutinous. Some blood-stained.

Put him on 'Yadil.' Next day his temperature, pulse and respirations were the same, also expectoration. On physical examination the respiratory murmur was less distinct and percussion slightly duller on right side. Next morning temperature was 105. Pulse and respirations the same. Ordered cold sponging every third hour. Temperature next morning was 97.2, pulse 86, respirations 28. Physical examination revealed only some bronchitic râles and the sputum had changed in character to that of bronchitic expectoration. From that on he made an uninterrupted recovery, and was up in twelve days. I am sure these particulars will interest you. ——L.R.C.P., L.R.C.S., L.A.H.

8th November, 1919.

Broncho-Pneumonia, Whooping Cough.

I have found 'Yadil' of considerable service, especially in the broncho-pneumonia of influenza and in whooping-cough. In both cases it appears to greatly mitigate the severity of the symptoms. A recent case of severe broncho-pneumonia in an adult—which had been treated with other drugs, without avail, while running a continuous temperature of 104 deg. to 105 deg., pulse 120, respiration 48 p.m., constant restless delirium—quickly responded to 'Yadil' which I prescribed, improvement being almost immediate, the temperature falling to normal in 48 hours with a corresponding general improvement. ——M.B., C.M.

Satisfactory in Lung Conditions. 21*st January*, 1920.

Please forward me one gallon jar of 'Yadil' Elixir for which I enclose my cheque. In the limited trial I have made of it so far I have found it most satisfactory in lung conditions. I intend trying it internally

in gonorrhœal conditions in conjunction with the usual local treatment, as I think it may be useful (the ordinary internal treatment is, I think, quite useless). The advantages of 'Yadil' in my opinion would be that in addition to its being a "tissue antiseptic," it has the quality of raising the resistance to secondary infections, instead of lowering it as is the case with the usual internal remedies. It is less likely also to affect digestion. I shall give it a thorough trial and let you know in due course the results. ——M.B., B.Ch.

Tubercular Colitis. *21st May,* 1920.

I have been using the Elixir in a case of tubercular colitis with the very best results.

——L.R.C.P.I. and L.M.

7th June, 1920.

Influenza, Pneumonia, Acute Rheumatism.

It will no doubt interest you to know that I have found 'Yadil' exceedingly valuable in many "septic" cases; for instance, it was only yesterday that I advised it in consultation for the treatment of a septic throat, associated with much enlargement of the glands of the neck, and a temperature which had persistently oscillated for ten days.

In certain cases of influenza, pneumonia and acute rheumatism I am also in the habit of using it, and with highly satisfactory results.

I should therefore like to take this opportunity of congratulating you upon the production of a preparation which, in my opinion, supplies a want that I have long felt was needed in certain conditions that I had previously found very resistant to ordinary methods of treatment.

——M.A. (Cantab.), L.R.C.P. (Lond.), M.R.C.S.

Phthisis Pulmonalis. 11*th September,* 1923.

I tried 'Yadil' in a very bad case of phthisis pulmonalis. The Doctor who examined her before she came home wrote me that she was so bad that he did not think any sanatorium would admit her. I put her on 'Yadil,' and, after a month or six weeks, she was able to get up a little and soon after she was admitted to a sanatorium, where she has gone back ever since and is being sent home again. I intend trying 'Yadil' again. ——M.D., C.M.

PUBLIC OPINION

SOUTHWARK, S.E.1.
2nd December, 1921.

In the Brotherhood of Research Chemistry I beg to acquaint you with the progress of my wife's case (pulmonary tuberculosis) since taking your Trimethenal allylic carbide. At the same time I commend to your notice Dr. ——'s verdict (copy of letter enclosed), and he said graver things than he actually wrote.

My wife suffered from pyelitis (D.P.) and six years ago was examined for T.B. on account of her cough. The verdict was neutral. Twelve months afterwards I sent her to Dr. —— as I considered her a T.B. case. Result again neutral. Fourteen months after that another examination by Dr. —— proved T.B. and she was sent to —— T.B. dispensary. She continued to get worse and fourteen months after commencing the treatment was in an advanced state, being highly bronchophatic, with weight greatly reduced and throwing up two pints of sputum daily.

By a remedy of my own invention we obtained, in ten months, an apparent healing of the right lung, with a distinct advance in weight, loss of cough and cessation of sputum. She then, one day, committed the indiscretion of running to catch a train, which caused a high pulse and hæmorrhage, which was suppressed with difficulty.

There followed a rapid return of bronchophaticity and a gradual and general collapse, and at the date of the attached specialist's report she had been bedridden for twelve months, with periodical hæmorrhage, an average daily temperature of 103, a pint and a half of sputum daily, complete loss of concentrative ability, respiration 32, pulse 160, and a loss in weight of three and half stone. That was but little more than six weeks ago. She then began to take 'Yadil' Antiseptic, and has since improved remarkably in appearance. General pigmentation (most pronounced) has left, her skin is of good colour; respiration 22; average temperature at 3.0 p.m. 100°F. and pulse 96—100. She now suffers no lumbar pain, and says she feels stronger by far. To-day, in spite of the time of the year being against her, she has gone out to see friends and progress continues.

I shall ever thank you for the kind and sympathetic letter you sent me, and I am strongly of the opinion that but for 'Yadil' my wife had now been deceased,

as the remedy applied by myself (Colloid Soln. I, with inhalations of vapourised I) seemed powerless to prevent the gradual collapse in the autumn of ——.

OLDHAM.

6th November, 1922.

Thanks very much for THE YADIL BOOK. I think it is very fine and should be in every home. My wife is still taking your 'Yadil' Antiseptic with fine results and I shall never be without a bottle in the house. My wife suffered with laryngitis for over two years and had tried nearly everything that had been recommended her, with no relief, until finally we became tired. She went to the doctor, who advised an operation which she went through, but was no better. She had four more operations and was still no better. The doctor said she had T.B. throat. She was visited by a local nurse and examined thoroughly at a certain place in the town and ordered treatment at home. Instead of the treatment ordered we decided to give 'Yadil' a fair trial, and I can honestly say it has done her more good than anything else and she is speaking better to-day than she has done for over two years. I am hoping she will be cured by 'Yadil.'

LEICESTER.

12*th November*, 1922.

Very many thanks for your prompt reply in sending the free copy of THE YADIL BOOK.

Last year I had a severe throat affection, having been examined by three doctors (two of them throat specialists). They decided it was T.B. I followed their advice *re* fresh air, etc., and improved quite a lot.

At the beginning of this year I began to notice your advertisements in the *Sunday Chronicle*, and decided to try 'Yadil.' I have used two small bottles and can say with truth that my throat is cured, as I have no discomfort or trouble with it at all.

I still take a dose each morning and use it as a gargle and mouth wash, and also as a nose douche. Although members of the household have very severe influenza colds, I never take the infection, and I attribute this to the use of 'Yadil.'

LIVERPOOL.

26th November, 1922.

I am a sufferer from tuberculosis and have had six months' sanatorium treatment. I have tried all kinds of medicines but have found nothing equal to 'Yadil.' I am now taking the third six-ounce bottle, and mean

to continue, as I have great confidence in it.

I am going to recommend it to other sanatorium patients.

OLDHAM.

30th December, 1922.

I think, now that Mrs. —— is so much improved, that there is no fear of a relapse.

Thirteen years ago she was found by the doctor to be suffering from pulmonary consumption. She was sent by the doctor to a sanatorium and she was there for two months, after which she went to another one for three months. When she came home the doctor told her that on no account must she wash, clean or do anything which would cause her to work her arms any more than she could possibly help.

She continued year after year, sometimes better, sometimes worse. If she attempted anything at all she would start with hæmorrhage from the lungs. She has had severe hæmorrhage on eight different occasions.

In 1915 I was recalled from France, as the doctor said she could not possibly get better. However, she rallied, but was practically an invalid.

Twelve months ago she commenced to take 'Yadil.' Now she is able to do her own washing and all her other household duties; the pain which she had constantly round her lungs has vanished, and she is feeling better than she has done for years.

Mrs. ——'s friends are astonished when they see her about, because they have known her so long as an invalid.

SOUTHEND-ON-SEA.

31st December, 1922.

Just a line thanking you for your 'YADIL' BOOK received some few weeks ago. I am very pleased with it.

I am suffering from pulmonary tuberculosis, and was recommended by Dr. —— to take 'Yadil.' That was twelve months ago, and I have continued taking it regularly ever since, with excellent results.

I have recommended it to all my friends, as they are so surprised at my recovery.

I have been suffering from pulmonary tuberculosis for seven years, and 'Yadil' is the only thing I have received any benefit from.

—— SANATORIUM.

3rd January, 1923.

I have had T.B. four years and can assure you that I have tried every available medicine and drug for the

disease, but it is only 'Yadil' that has made me a better man. I have put on flesh and have not had a hæmorrhage since I commenced taking it.

I have improved so much that I am now undergoing training as a cabinet maker.

I am unable to get 'Yadil' down here and I miss it very much.

WALTHAMSTOW.

12th February, 1923.

Very many thanks for THE YADIL BOOK, which I much appreciate. I have recently undergone sanatorium treatment for pulmonary tuberculosis, first stage, and I am now trying the 'Yadil' treatment.

Perhaps it will interest you to know that whilst in the sanatorium my heart became troublesome, and just before my discharge the visiting specialist stated that my heart trouble was caused through a certain amount of poison being circulated through my system. He said that, no matter what treatment was given, some patients will not turn that corner. I am pleased to say, however, that the first week of taking 'Yadil' has completely cured me. Before, my pulse used to range from 112 to 186; now it is quite normal and my heart has stopped its thumping.

My uncle was the first to recommend 'Yadil' for T.B. but I took very little notice, although he said it had cured four of his children of scarlet fever in a week. I decided to buy it after seeing such a fine description in the February issue of *Reynolds'* newspaper. I have certainly great faith in it, and I will certainly recommend it to all my friends.

MANCHESTER.

23rd February, 1923.

I am a disabled ex-service man, discharged in 1917 with Bright's disease. I worked eleven months and then I became ill. It was then that the doctor found I had contracted pulmonary tuberculosis.

I was ordered into a sanatorium, where I stayed seven months. Not feeling any better, I came home and started taking different kinds of stuff, but they seemed to do me no good.

About October of each year I seemed to have a breakdown, so this time I thought I would try a small bottle of 'Yadil.' Finding it worked wonders with me, I thought I would get a larger one. I feel quite sure it must be 'Yadil' that is doing me good. My cough is much easier, and I am getting better sleep at night.

I shall always have a bottle of 'Yadil' in my house, and my wife and children are taking it as a prevention.

SOUTH AFRICA.

3rd March, 1923.

I am now on my third bottle of 'Yadil' and am going to continue taking it for some time.

You cannot imagine how bad I was before taking your antiseptic. I had blood-spitting, rotten sputum, bad rest at night and no inclination to eat. Now all that is finished, and I am absolutely A.1. I am putting on flesh and feel quite boyish, and I thank God for 'Yadil.'

OLDHAM.

7th March, 1923.

I first used 'Yadil' in 1921 for throat catarrh and malaria, having previously been under medical treatment for two years. I was completely cured. I put 'Yadil' into my private ambulance case, which I always carry at my work. I found that a dressing of gauze soaked with 'Yadil,' and held in place with strapping, gave quicker healing results and was more comfortable than the usual bulky dressings. This method was greatly welcomed by the operatives, as it enabled them to continue their work, which the ordinary bandage prevented.

I have seen excellent results with 'Yadil' in consumption of the throat, pulmonary T.B., abscesses, whitlows, bronchitis, catarrh, the effects of gas poisoning, septic poisoning, malaria, wounds, cuts, burns, influenza, measles, etc.

The following cases illustrate some practical results with 'Yadil.'

Mr. ——, a young collier, had suffered several years with tubercular abscesses in the neck. He had done practically no work for two years. He was given a course of 'Yadil' covering four months. The abscesses dried up, appetite returned, he put on weight and is now back at work, not having lost a day since.

Mr. ——, aged 21. Discharged from sanatorium with pulmonary tuberculosis, twelve months ago. Mother said he was a living skeleton. Under 'Yadil' he has become a fine robust young man. Previously he had been ill for over two years.

Mr. ——. Suffering from the effects of gas poisoning. Very bad cough. Recommended to take 'Yadil.' Cough gone, and says he had never felt so well since leaving the army.

Mr. ——. A life sufferer from bronchitis. Had never been able to go through a winter without severe

attacks. Was persuaded to take 'Yadil' last year. Has had no bronchitis since. Claims this to be the first winter he has enjoyed for years.

BARROW-IN-FURNESS.
7th March, 1923.

I became acquainted with the healing properties of Yadil' over five years ago. It was demonstrated in my own family, in a long-standing chronic case of ulcer in the eye, which threatened the sight. Previous treatments had been useless. The results with 'Yadil' were so remarkable that neighbours talked about the case, and it was not long before a colony of 'Yadil' users grew up here.

Whilst at Messrs. Vickers, as Ambulance Officer, I was able to make good use of 'Yadil' Antiseptic and the Ointment, and have yet to find anything better for burns, cuts, wounds, sores, etc. I have dressed some thousands of cases and 'Yadil' has never failed me. Consumption, ulcers, fevers, whooping cough, bad legs, blood poisoning, even toothache — all seem equally curable with 'Yadil.'

A young woman with pneumonia and pleurisy, and with every symptom of galloping consumption, was pronounced by three doctors to be a hopeless case. She was put on 'Yadil,' teaspoonful doses three or four times daily. Inside of three weeks, to the astonishment of the three doctors, she was out for walks.

I know a man who, for two years, was laid up with consumption of the spine. A famous surgeon in ——— had him under his care for six months without success. Others had failed before. 'Yadil' put him on his feet and he is now at work.

My experience shows that 'Yadil' surpasses iodine as a dressing because it is more reliable. Moreover it does not corrode the tin of the First Aid outfit.

SOUTH AFRICA.
10th March, 1923.

He was in the last stages of consumption and was practically a dead man. He has just left our office. His eyes are bright, complexion clear, sleeps well and is eating about three times as much as he used to.

He is so healthy now that he wants to fight everybody he meets.

I have not heard of any failures with 'Yadil' yet.

GROESLON.

13*th March*, 1923.

I have been a sufferer for five years, and have been to a sanatorium, tried all sorts of medicine and many doctors, but found no relief until I was recommended 'Yadil'! I am on the fourth bottle, and am very pleased to say I have been a different man since starting taking 'Yadil.' I will recommend it to all my friends.

SHADWELL.

15*th March*, 1923.

Thank you for THE YADIL BOOK. I have been telling everyone I meet about the wonderful remedy.

My six weeks' persistent cough, with much sputum, is already better after six doses—thanks to 'Yadil.'

BARROW-IN-FURNESS.

22*nd March*, 1923.

I paid Mr. ——— a visit early in December last, and I heard from him that he had been laid up for about two years with tubercular caries of the spine.

Sir ——— ——— had him under observation, as an out-patient, for about six months, and I understand that he operated upon him, with other doctors—five operations in all. As he was operated upon and stitched up, he broke out in other places which failed to heal.

On the recommendation of an assistant of Messrs. ———, chemists of ———, he tried 'Yadil.' In Mr. ———'s own words, he has never looked back, and at the time I saw him, he was doing well, with a normal temperature, and was conducting his own business.

LONDON.

21*st April*, 1923.

I have refrained from acknowledging the receipt of THE YADIL BOOK, which I do now with the most grateful thanks, because I wanted to acquaint you with the progress my wife might make from the taking of your preparation.

If you refer to the correspondence, you will find that I wrote to you on receipt of a letter from the Tuberculosis Officer, saying that she had "advanced disease" and that she would not materially benefit from sanatorium treatment. The contents of the letter distracted me, for, living so many miles apart, it seemed to me that the only thing I could do was to wait patiently for her impending death, without being able to offer the slightest resistance.

It was at that juncture I saw your full-page advertisement in *John Bull*, and I wrote to you.

Going North I took one 6-oz. bottle of 'Yadil' with me and, greatly against her inclinations, I prevailed upon my wife to commence taking it. At the end of the third day I noticed that the rattling sound in her chest which accompanied her breathing had stopped, and then I had to return to London.

Since then I have had to rely upon her letters for information, and from them I gather that 'Yadil' has stopped her night-sweats, given her peaceful sleep, greatly improved her appetite and increased her strength, so that she does not feel the effects of lassitude, and is now beginning to enjoy her walks in the fresh air.

Up to the present she has consumed three six-ounce bottles—a bottle per week. Her cough is much the same, but I have hopes of that abating soon, and finally being cured.

A month ago I was full of despair, but to-day I believe that, with perseverance, there are reasonable hopes of recovery.

My wife caught cold sixteen months ago and, despite unremitting care from her medical attendant, she had been going from bad to worse. Until we tried the first bottle of 'Yadil' nothing did her the slightest good, and her food caused vomiting. This has now stopped and she has begun to eat heartily. She has now the firm conviction that 'Yadil' will cure her, and I share in that belief. I wish that I had known about 'Yadil' months ago.

PORTH.

23rd April, 1923.

I have benefited a lot from using the 'Yadil' Antiseptic. Two years ago I had a severe hæmorrhage and entered a sanatorium. I was there eight months and then I had so many attacks that they sent me to another place. I did not get on there and, having given the hospital nine months' trial, mother decided to have me home.

I have been home five months, and was getting on very well until a month ago, when I contracted influenza. Since taking your valuable remedy I have been able to get up a few hours each day.

I think your YADIL BOOK should be in every household.

ROCHESTER.

26th April, 1923.

I am convinced of the great worth of 'Yadil' in

pulmonary tuberculosis. After only three months' treatment there is a great improvement; in fact, I have practically no sputum or cough, and feel as well as I have ever done.

I shall certainly recommend 'Yadil' to all I come into contact with.

Again thanking you and wishing you every success in your life-saving campaign, etc.

PERTH.

30th April, 1923.

I have taken one six-ounce bottle of 'Yadil' and am pleased to report great benefit. A strain brought on hæmorrhage, and of three sputum tests No. 2 was slightly positive. I was told it was a very early case of tuberculosis. Weight 9 st. 9 lbs. (Height 5 ft. 11 in.) Three months' sanatorium treatment, weight 10 st. 7 lbs. Still coughing a bit. Another month's change; weight 10 st. 9 lbs.

Commenced 'Yadil.' After a fortnight, weight 11 st. 3 lbs. Sputum is still troublesome and an occasional cough, but night sweats have disappeared.

Since taking 'Yadil' I have returned to work and feel generally fit, except for the sputum, which seems to be mostly after meals.

It would be too much to expect one bottle to effect a cure, but I have established my belief in your wonderful antiseptic, and have great hopes.

LONDON.

3rd May, 1923.

You may be interested to know that last year I had rather a bad hæmorrhage in my right lung. I took 'Yadil' on the recommendation of a friend, for three months. In April of this year I went to a doctor as I felt ill, and was told that my right lung had completely healed. I said that I attributed the healing to 'Yadil,' and was told to go back to it for my present trouble which is slight pleurisy of the left lung. I am now embarked on another three months' course, and I recommend it to all my friends.

BIRMINGHAM.

9th May, 1923.

My husband was ill with pleurisy which turned to pulmonary tuberculosis, and the doctor told me he would not live. The doctor has been giving him 'Yadil,' and I am pleased to say my husband has now started work.

SOUTHAMPTON.

15*th, May,* 1923.

Just a few lines to let you know how I have been getting on since I last wrote you. At Xmas time I was very bad and could hardly crawl round. Since then, however, I have been slowly but surely improving. I seem to be getting stronger every day. I am doing my work—collecting, consequently out in the open air—and whereas previously I had to rest every few yards, I can now walk considerable distances without feeling fatigued, and I can manage the hills much better. My cough is not nearly so bad and I sleep and eat fairly well. I am in bed each night by 9.0 or 9.30, but wake up for an hour or so every morning at 3.0 o'clock. My weight is not increasing. I attach a record of weights. I am rather lower than when I wrote you last. I have now been taking 'Yadil' since August last, also a vegetable and fruit diet, including nuts.

About a week ago, and again on Tuesday night, my sputum was full of blood, but not streaked and it soon passed off. This is the first I have seen for a long time. I am certainly better, and will keep 'Yadil' going for the full twelve months as I am certain it will cure me. Of this I have not the slightest doubt. I recommend you whenever I can.

BURNLEY.

16*th May,* 1923.

I desire to thank you for the advice you gave me. As I said in my last letter, I am seen and examined regularly by four different doctors, who ordered me X-ray treatment. The hospital doctor who carries out the X-ray treatment, and my two private doctors, all testify to my wonderful and somewhat sudden recovery. I have no constitutional T.B. but local T.B. in the form of lupus in three different places, hand, nose and roof of mouth.

About 3½ years ago I started with lupus on the inside of the upper lip. At the time I naturally suspected what it was and applied iodine and other different remedies. I have continued to do so ever since, but all to no avail, until about three months ago, when I commenced taking 'Yadil' internally, and I can honestly say that it is now perfectly healed. The most surprising thing about it is that 'Yadil' was not introduced until the lupus had got a good hold, and of course, though not visible from the outside, it had eaten some of the lip. To my surprise, not only has 'Yadil' healed

it, but it has also filled in the flesh perfectly again. The roof of my mouth is practically healed, and so also are my nose and hand. I state this with the doctor's authority.

I have been to my chemist to-day for a quart bottle of 'Yadil' which I had ordered, but had to be content with a pint as he was unable to obtain more at present. I fully intend to keep on with it until a perfect cure has been effected, and for some time afterwards, as a preventive measure.

LEICESTER.
23rd May, 1923.

I have been using 'Yadil' for lupus with marked improvement.

SOUTHWICK.
25th May, 1923.

I am a nurse, and unfortunately have contracted phthisis. I have been ill for a year, and a few weeks ago changed my doctor, who put me on 'Yadil,' and already I am feeling much improved and am steadily gaining weight.

DOWLAIS.
26th May, 1923.

Thank you for THE YADIL BOOK which we find invaluable. My husband and I are anxious to make your preparation known, having derived great benefit from it ourselves.

The young friend to whom we are supplying it is improving. The perspirations have stopped, she sleeps and eats better and we are hoping, with your remedy, to save her from an early grave.

LEICESTER.
27th May, 1923.

'Yadil' has proved a blessing to me in my case of lupus in the face. I have suffered for ten years now. I started with the usual hospital treatment—snow, peroxide, iodex, etc., but received very little benefit for my pains. I then had three years' private X-ray treatment which did me a great deal of good. I have since had no outside medical treatment as I managed to heal all the small eruptions myself from time to time, but they kept breaking out again. I have lost the tip and sides of my nose, and it is a great handicap to me in my work.

I have used the 'Yadil' Ointment and Antiseptic for two months and I am delighted with the result. My friends are surprised, and one of my little children

said the other day, "Daddy, your face is going white, like ours." That is a splendid tribute to 'Yadil,' I think. 'Yadil' is wonderful.

LEEDS.

27th May, 1923.

I wish to thank you for sending me THE YADIL BOOK. I know of one person, who was in the second stage of consumption, who has already greatly benefited by the treatment. I certainly think that 'Yadil' ought to be more widely known by the public.

WHITBY.

1st June, 1923.

I am writing to ask you to send me another of your YADIL BOOKS. I am now starting on the third 6-oz. bottle. My son, aged nine, who has tuberculosis and is now at home waiting for a bed in a sanatorium, started with your antiseptic a month ago after reading of it in *John Bull*. I had tried everything and just felt heartbroken, for I could see him simply fading away from me. Before the end of one week my doctor saw a great change in him and begged me to keep it up. I am making 'Yadil' well-known here. I gave THE YADIL BOOK received from you to my doctor. The clinic nurse is anxious for one, too, and also the clinic doctor. Could you let me have at least three of your books, so that I can place them with those who will study them. My doctor said, a month ago, that if he found that 'Yadil' was doing well for my boy he would make it known all over here, and oh! I dare hardly think that such a splendid thing as curing my boy can happen, yet I can see for myself that he is being cured by it. I know that it will take some time, but only in a month's time he has lost his cough and his night sweats. Instead of losing five to six pounds in a fortnight, he has lost only two ounces in three weeks, and people are saying what a splendid change there has taken place in my boy. I cannot thank you enough for what you have done for my son.

PENRITH.

3rd June, 1923.

Thanks for THE YADIL BOOK received and appreciated very much. I am very much indebted to you for the benefit I have obtained from the use of your 'Yadil' and the advice you gave me on diet about a year ago. I first heard of 'Yadil' in May, 1922, when I was a patient in a sanatorium. During my stay there I manifested nearly all the known symptoms of consumption,

extreme weakness, loss of flesh, increasing sputum, falling hair, burning hands and feet, night sweats and a high fever. My case caused concern in the sanatorium, and at one time a doctor was called out in the night and ordered preparation for a hæmorrhage, which never came. My temperature was up to 103 and 104, and down to 95 (collapse point) intermittently within a few days. My conviction is that I was fast dying while the authorities were helplessly looking on. The only thing that was done to me was the tapping of my back every time I had a temperature.

I left this institution after nearly 3 months, on my own account, on hearing of the death of my mother in London. I went to Worthing where I saw your 'Yadil' in a chemist's shop and obtained a bottle. I also wrote to you and received a letter from you which I appreciated very much. I continued with the 'Yadil' for about three months and the improvement was remarkable. I gained over a stone in weight, added strength, improved in appetite, lost my night sweats, etc. From Worthing I returned to ——— and regret I ceased to take the 'Yadil.' Nevertheless it had done a good work and I continued to improve. Within a year of my breakdown in health, *i.e.* January of this year, I was offered work in ———. I took the work and have never looked back. To indicate the completeness of my cure, I only need to mention the work I am doing. It is labouring in a building scheme which includes drilling, blasting and removing rock, also pick and shovel work. This for 8½ hours a day, and about 1½ hours walking over rough mountain roads to and from my work. I am feeling as well as ever I have done. I still have 'Yadil' with me, and mean to continue the morning and evening doses. I am strongly recommending it also to my friends. I hope my experience is an encouragement to you, for your work is epoch-making, a sign of the times.

PETERBOROUGH.
5th June, 1923.

My little girl, aged 7 years, for twelve months was subject to a high, fluctuating temperature, varying from 99 to 104. She was naturally going off food and becoming very thin, and we were afraid we should lose her. She was unable to attend school and during the twelve months we called in three doctors, who could not say definitely what was actually the trouble. One said it might be tuberculosis, and treated her accord-

ingly, but with no result. Another said it might be rheumatism, or a germ in the bladder, and treated accordingly, but again with no result. The last doctor called could say nothing, but simply experimented, giving tonics and advocating rest, but with no beneficial result. I got tired of all this and had given up doctors altogether, when, fortunately, one day I saw your advertisement in *John Bull*. The fact that 'Yadil' was claimed to be a vegetable internal disinfectant, struck me very forcibly and hopefully. I tried a 6-oz. bottle on the child. Her temperature in two days was more or less settled and she appeared better. She has now had three bottles, has a normal temperature, eats better, sleeps well, plays well, and I was able, a month after first trying 'Yadil' on the child, to send her to school and she has not missed a day since. I shall keep her on 'Yadil' for some time. It may or may not be necessary, but I want to be sure of a lasting success after the worrying time we have had with her. If it had not been for 'Yadil' we should have had to send her to a sanatorium this spring.

EDINBURGH.
6th June, 1923.

I am taking 'Yadil' and I think it is splendid. It has cured my catarrh.

A friend was suffering from tuberculosis and was taken to the hospital. His mother was sent for and told that there was no hope, as he had "galloping consumption" and had only a few weeks to live. She took him home to await, as she thought, the end, but my son, when visiting him, introduced 'Yadil.' The patient at once commenced to take it and has been improving daily since. Yesterday he was able to walk with the aid of a stick.

His doctor, on seeing his marvellous recovery, said that the only thing that could have saved him was 'Yadil.'

STALYBRIDGE.
11th June, 1923.

I was found to be suffering from pulmonary tuberculosis by my doctor about twelve months ago, and he at once advised sanatorium treatment. I was sent to a sanatorium last July, where I have been until about a month ago, when I returned home.

During the last three months I was there, I was taking your 'Yadil' Antiseptic. It was rather difficult to keep to your treatment whilst in the sanatorium, but

I am quite satisfied that the result was as good as could be expected under the circumstances.

Since I came home I have been taking 'Yadil' Antiseptic, but my doctor at home advised me to take the 'Yadil' Elixir, and I have been doing so and think the results are about the same as when taking the Antiseptic. I may say that I am of the opinion that the ten months' sanatorium treatment has been of little or no use to me and that I have gained more benefit from taking your antiseptic during the last four months or so.

I shall do all in my power to advertise your 'Yadil' to my friends, and I shall also be obliged if you will forward me your latest book on 'Yadil.'

SOUTHAMPTON.
16*th June*, 1923.

Some time ago my doctor recommended 'Yadil' for my wife, who, unfortunately, suffers from tuberculosis.

A lady who was supposed to be on her death bed with tuberculosis is now about again.

LONDON.
14*th August*, 1923.

My wife has been taking 'Yadil' for 16 weeks and I am sure that she is being cured. She still coughs a little and presents a wasted appearance, but the return of strength is astonishing. At Easter she couldn't walk. On Bank Holiday evening she took me for a three hour walk and never turned a hair; it was I who was tired. As you know, this was a case which was deemed to be hopeless. I am more than satisfied with the rate of progress. Have noticed cases of speedy cures in whooping-cough lately.

1*st September*, 1923.

I have had spinal trouble for eighteen years, eight of which have been spent in bed and hospital. A large abscess formed in my back and I have had seven operations, the last in April of this year. Before this I was in bed 3½ years. Since the last operation I have had an open wound (tubercular) which discharges thick pus.

I commenced using 'Yadil' both externally and internally three months ago. My wound is drying and almost healed; I am feeling better, putting on weight and, further, am now able to walk.

PRICE LIST

For the British Isles

Please get your supplies from chemists if at all possible. If not we will send direct post free on receipt of remittance.
